

IdealPark

Technology with style: every Ideal Park car lift is a one-of-a-kind piece of art. A system built with passion and craftsmanship, with obsessive attention to detail and functionality.

Recognising innovation and tradition, IdealPark manufactures car lifts making them unique, customized, perfectly suiting the environment and landscape.

Established in one of the most advanced industrialized areas of Italy (Verona, North-East), IdealPark is part of a group of companies founded by the Stevan family which, for over 50 years, developed the challenge of lifting into an art form.

Ideale

Functionality

where the lift becomes an ally of the designer to create a vertical connection where a slide is not feasible, due to space constraints. It then becomes an indispensable means of conveyance that elegantly connects the various, otherwise inaccessible parking levels. This is a common situation in historic towns - where buildings were not originally designed for cars - or for resorts needing to expand the parking spaces for their guests. Ferrari, Lamborghini and Pagani have enhanced the exhibition areas of their headquarters with IdealPark systems that connect the various levels to be accessed with supercars.

The company always carries out projects in collaboration with architects and designers, to find new ways for style, functionality, housing and city planning.

a l p

Aesthetics

where the lift becomes an alternative solution to the ramp, combining functionality and aesthetics, thus being able to protect and devote all the external space to gardens or courtyards. Through a wide choice of colours, lighting and finishes, the system can be customised for a unique result, in harmony with the surrounding environment. This type of solution seamlessly blends with the style of the house, providing a sense of order and elegance as well as innovative and careful organisation of space.

Currently IdealPark extends innovation and beauty to more than 40 countries worldwide, thanks to a network of partners and dealers. IdealPark has invented a new approach to living spaces and emotions, with installations in villas, condominiums, resorts, production facilities and car dealers.

ark

Protection

where the lift becomes a security system in settings where one wishes to conceal a garage to protect cars or collections in underground premises. Roof-top solutions remain invisible when not in motion, car picking operations can only take place using a coded key or badge and only one car at a time can be carried. The car park served by a car lift therefore benefits from security and privacy, becoming a secret place where to keep one's cherished cars or create a showroom of one's collections.
